

**SCRATCH HOG GLASS SCRATCH REPAIR SYSTEM**  
**INNOVATION IN RESTORATION**

# THE SCRATCH HOG

## Scratch Removal/Glass Restoration System

Glass Technology has engineered another innovative breakthrough with the Scratch Hog™ Glass Restoration System; the most effective and user-friendly glass restoration system ever developed. It removes severe scratches, hard water staining, and many other problematic glass blemishes that other products can't touch!

## Advanced Design and Superior Results

Common sense dictates that if you want to remove a scratch, then you must remove some of the glass to get to the bottom of the damage. There is no other way to effectively remove scratches and restore glass to its original clarity. While other systems try to sell you on illogical approaches, Glass Technology combines innovative technology and real science to produce superior results.

- The Scratch Hog™ System safely goes four times deeper than other methods and removes mild to severe scratches in a fraction of the time of other products. This will allow you to take on scratch repair jobs that your competitors reluctantly have to turn down; time is profitability.
- The Scratch Hog™ uses a series of advanced glass cutting discs created by a patented micro-replication process. This breakthrough technology forms the discs by applying microscopic 3-D structures in a uniform pyramid pattern to a special backing material. Each disc is graded by micron size and color-coded to help you select the proper disc depending on the severity of the scratch.

## Driven by Innovation

We are driven to search for the best solutions, perpetually improve our products and passionately seek the best results.

The Scratch Hog™ pumps distilled water from a self contained reservoir through an industrial grade Center Water Feed Machine. Other systems can leave the cutting surface hot and dry with only a hand-held spray bottle that is not up to the task. Feeding an ample supply of water through the center of the glass cutting disc accomplishes 3 key purposes:

1. Water activates the cutting properties of the Scratch Hog's patented cutting discs.
2. Water spins through the cutting disc and flushes away ground glass to expose new layers and provide you with a clean and clear work surface.
3. Bathing the glass with water as you work maintains a controlled, safe temperature. Other systems generate extreme temperatures that risk cracking the glass and eliminating your profit.

## Tested With Results That Don't Lie

The Scratch Hog™ will continue to be the product of choice for glass restoration because of Glass Technology's commitment to provide the most versatile and efficient product, backed with verified testing and real data.

## Tested With Distortion Free Results

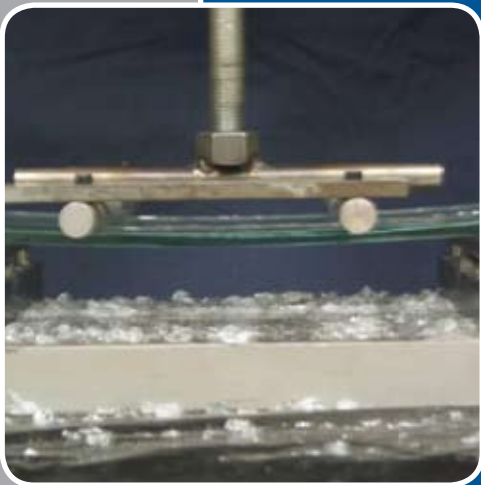

Glass Technology's Scratch Hog™ system was independently tested under ASTM standards to analyze the distortion factor that was created with the system. 30 pieces of 1/4" tempered Old Castle glass pieces were scratched for evaluation. These samples were then repaired with the Scratch Hog™ system.

- Scratching was produced using a 1 lb. steel ball that was secured to 320 grit carbide abrasive paper. Ten strokes were applied to the sample glass pieces using the steel ball and abrasive paper to produce the necessary damaged sample pieces. To our knowledge, no heavier abrasive material has ever been used for testing glass restoration to ASTM standards.
- "Upon repair of the scratched areas by Glass Technology, the sample condition was returned to that of the initial evaluation with no defects observed under these ASTM strict guidelines." (Arch Testing)

## Tested to Improve the Integrity of Glass

Glass Technology has also had the Scratch Hog™ independently tested under ASTM guidelines for flexural analysis. During this testing, 90 pieces of 1/4" tempered Old Castle glass were analyzed. 60 of these pieces were scratched using the same 1 lb. steel ball and 320 grit carbide abrasive paper to produce the necessary damaged sample pieces. An additional 30 samples were left in original conditional as the control sample. 30 of the 60 damaged pieces were repaired using the Scratch Hog™ system.

- "Flexural Testing yielded a mean Modulus of Rupture of 26,300 psi for the control samples, 25,800 psi for the scratched samples, and 26,100 psi for the repaired samples." (Arch Testing)
- This testing confirms that by repairing the glass with the Scratch Hog™ you not only achieve distortion free results, but also increase the structural integrity of the glass. Under ASTM testing, Glass Technology's Scratch Hog™ was able to increase the integrity of the repaired sample by over 300 psi.

## Easy to Operate, Fast and Profitable

The Scratch Hog™ System is designed to help you perform professional glass restorations in a timely manner, which will produce satisfied customers.

- The Scratch Hog™ works fast and is easy to operate. Some competitive systems attempt to polish away the entire scratch, a time consuming process that will greatly diminish your profits. Others use compounds in slurry form, which can be messy, bulky and costly. The speed and efficiency of the Scratch Hog™ System is unparalleled. The Scratch Hog™ enables you to quickly and safely get to the bottom of the scratch and then polish the glass back to like-new condition with restored clarity and strength.
- The Scratch Hog™ System reliably delivers professional results time after time without any need for magic, questionable science, or expensive compounds. We accomplish this by combining sound, innovative technology with the finest components and the best support in the industry.
- High demand means profits for you. The Scratch Hog™ systems ease of operation, speed and performance result in the most profitable glass restoration solution in the industry. With standard glass scratch removal rates in the industry being \$100.00 to \$125.00 per hour, you can see the benefits of getting into this rapidly emerging industry. The Scratch Hog™ is great as an addition to your existing business or as a stand-alone business operation. Either way, this restoration system gives you a substantial competitive advantage in your marketplace. The market for the Scratch Hog™ includes such applications as: glass damaged during new construction, storefront graffiti damage, water-stained glass, scratched glass furniture, scratched automotive glass, imperfect manufactured glass products and many other applications. The Scratch Hog™ is designed to remove scratches from all types of glass, including: automotive glass, mirrors, tempered glass, as well as commercial and residential glass. All this translates into profits for you.

## Repair and Protect

Many cities across the country are experiencing graffiti in the form of glass etching, scratching, and paint from vandals. With the Scratch Hog™, not only can one remove graffiti, restoring glass to its original finish, but the glass can also be protected and its life prolonged for most architectural glass surfaces. Expand your Glass Scratch Restoration business by adding Glass Technology's Diamond Clear Glass Graffiti Film. Easy, profitable and effective, this is a perfect product and service for any glass restoration professional using the Scratch Hog™.

## We are Successful Because our Customers are Successful!

In addition to producing the world's highest quality restorations, Glass Technology arms you with everything you need to be successful.

### Free Factory Training

Glass Technology's commitment to your success goes beyond selling you the best equipment in the industry. When you purchase a Glass Technology system, you receive Free Hands-On Training with your new system at our facility in Durango, Colorado.

- Our certified technicians will instruct you on how to repair all types of scratch damage.
- You'll learn all of the tricks of the trade so you can perform superior repairs that will be the envy of your competitors.
- Free hands-on factory training can give you the head start you need to generate revenue quickly with your new Scratch Hog™ System.

### Free Technical Support

At Glass Technology, support is always there, whether you are in the middle of a repair and need immediate help or you need an opinion on your next advertising campaign. Call us anytime between 8am and 5pm, Monday through Friday, and you will find that the Glass Technology Support Team is here to help you.

When you purchase a Scratch Hog™ glass scratch repair system, Glass Technology makes a commitment to deliver leading edge technology and innovation, backed by the best training and support in the industry. This commitment is what creates market leaders, produces success, and generates superior solutions for you and your customers. Our goal is to keep your customers coming back and insure a successful future for your business.

In addition, Glass Technology also includes your company in our national referral program which allows your customers to easily and effectively search for your business directly through our unique online portal. This website is marketed and managed by Glass Technology for Glass Technology customers.

Experts choose Glass Technology systems to get professional results.
